POWERMIR

From left to right, top to down : Chips, turnkey system, QCL + electronics, HHL-package

Benefits:

- ITAR free technology
- QCW operating mode for increased wall-plug efficiency and reduced thermal dissipation
- Reproducible specs manufacturing for series productions
- Circular beam (option) to reduce efforts made by clients to shape the beam

ITAR free MIR high-power quantum cascade laser systems

The PowerMir product line is high power pulsed Fabry Perot Quantum Cascade Lasers (QCL) based on highperformance technology proprietary lasers described and the in this datasheet emit around 4.6 microns of wavelength.

4.6µm QCW QCL

Proudly manufactured in France, mirSense lasers are ITAR free and have outstanding power and wall-plug efficiency performances. Customers purchase different laser can system configurations like plug-and-play benchtop turnkey OEM systems, driver + laser modules or just the HHLpackaged lasers.

Π.		1	
Fe	הכי	ты	res
1	- 0	ιu	ICJ

Maximum power ^{1 2}		>2W (Elliptical beam) or > 1,5W (Circular beam) or < 500mW or < 100mW
Mode of operation	>	Quasi-CW, high duty cycled pulsed
Central wavelength ⁽³⁾	>	4.6 μm +/- 0.1 μm
Pulse frequency	>	> 500 kHz
Divergence for the lasers with standard beam ⁴	\rangle	< 6 mrad (horizontal) < 4 mrad (vertical)

1. The maximum power is the maximum average optical power available in the spetrum band 4.5 microns to 4.8 microns.

2. The power is given when the base plate temperature of the HHL-package is regulated at +20°C. < 500mW means that the average power will be

between 450mW and 500mW. Under 500mW, the laser is not considered a dual use product and therefore no export control applies.

3. The central wavelength is defined as the optical power weighted average of the wavelength.

4. The divergence is given at full angle. The shape of the beam is slightly elliptical

¹. The divergence is given at full angle in the far field. The shape of the beam is circular

². The elliptical ratio is, considering the divergences measured in the far field of the horizontal and vertical axis of the beam, the ratio of the widest divergence over the smallest divergence.

Typical Beam quality

The picture shows the 2D mapping of the laser far field taken in intensity scale.

Standard laser beam

Laser with circular beam option

The circular beam that mirSense clients get is much more robust than if an external optical component were used to make the beam circular because the circular beam option means that mirSense manufactures a special chip that emits a circular beam before the lens, ie the circularity is reached at chip-level so it's a very robust feature.

Average optical power

Average optical power of the laser as a function of the laser duty cycle with a pulsewidth of 300ns and a laser temperature of $+20^{\circ}$ C

500mW laser

> 1W laser

Typical spectrum

4.6µm

SYSTEM CONFIGURATIONS

Customers can purchase different laser systems depending on their needs

For customers who want to purchase just the laser, mirSense provides HHLpackaged lasers with a built-in TEC and thermistor to control the chip temperature and a collimating lens inside the package. These lasers are burned-in during the manufacturing process to guarantee power and wavelength stability over time and the packages are hermetically sealed with dry N2 air inside.

For clients who want to integrate the laser in a product, mirSense provides an OEM module controllable by Modbus or Windows Software and made of a PCB driver connected to a HHL-packaged laser. The driver takes care of temperature and current control, laser safety and modulation is possible, both external with a TTL signal or with a Windows software.

For lab development purposes, mirSense provides a plug-and-play benchtop turnkey system that takes care of everything like temperature and current control, air cooling and laser safety and comes with a user friendly Windows software to operate the laser and modulate its power (external TTL modulation being also possible). The turnkey system can control two laser heads at the same time and can be fitted with red beam alignment lasers to help find the infrared spot in the far field.

Benchtop turnkey system

Photonic Solutions Ltd Edinburgh EH14 4AP +44 131 664 8122 www.photonicsolutions.co.uk

Benefits:

 Supports high-power lasers and can operate lasers >1W of power

POWERMIR

- Fast: can modulate down to 10 nanoseconds of pulsewidth
- Can operate QCW lasers
- Plug-and-play system that takes care of everything (air cooling, driver, temperature management..)
- Keep your driver for future extra laser heads no need to purchase a new driver
- Red beam laser helps you find the IR beam in the far distance

The plug-and-play benchtop turnkey system

The turnkey system is an air-cooled plugand-play benchtop system that customers can use for lab development purposes.

A user friendly Windows software controls both the temperature and the current, thus preventing laser damage. The power is easily modulated by software or external TTL signal.

For different projects, the same driver can be connected to one or two laser heads, regardless of wavelength or power.

This system is CE-marked and has an interlock.

Functionalities		Laser safety, Laser driver (ON/OFF), Laser temperature and TEC control, frequency modulation, duty cycle, external TTL	
		USB interface for PC connexion (USB cable supplied)	
		TTL trig IN connector for TTL external signal	
Physical interface		TTL trig OUT connector for synchronisation	
,		Option: Extra red laser beam (class 3R) (typically <3mrad of pointing difference between the red laser beam and the infra-red beam) to find the IR beam is in the farfield.	
Software		A user friendly Windows software is supplied	
Input power	\rangle	24V DC (an AC/DC power transformer is supplied)	
Dimension	\rangle	laser head: 20cm x 15cm x 6cm / driver: 25cm*15cm*6cm	
Weight		925 g	
Operational temperature	\rangle	+10°C to +30°C of ambient temperature	
Laser head cooling	\rangle	Air cooled

POWERMIR **by mir**Sense

Software screenshot example

You might want to read the following documents that were written to help our customers better control their turnkey systems, please ask your mirSense representative to send you

The PC software allows the user to easily select 3 different power levels over which the user can modulate either by using the software with a 252-points modulation envelope or with an external TTL signal. The software has built-in safety features that safeguard the laser (for example, temperature management)

Connectors and cables are provided

PowerMir Application note - Describes how you can modulate the power
Turnkey system Software user guide - Describes how you can control the system with the supplied Windows Software
Communication protocol - Describes how you can control the system with Modbus communication over RS485
Turnkey system General User guide - Describes how to generally operate the system

Laser + driver OEM modules

POEM series : HHL-packaged laser + driver OEM modules

Safety notice:

This POEM system is <u>not</u> CE-marked because it is considered an OEM sub-component to be integrated by the customer into a larger system.

mirSense doesn't supply the power transformer to power the system. When customers use this system inside their lab without integrating it into a larger system, the customer takes responsibility for operating a non-CE marked laser in their lab environment.

Benefits:

- Generates electrical pulsewidths down to 10ns
- Both external (TTL) and internal modulation with Windows software possible
- Driver includes both temperature and current control and onboard firmware safeguards the laser
- Controllable both with user friendly Windows software supplied or with Modbus communications over RS485
- Several systems can be controlled and synchronized for power combination
- Designed for OEM integration into systems

Features

Functionalities	\rangle	Laser safety, Laser driver (ON/OFF), Laser temperature and TEC control, frequency modulation, external TTL
Physical interface		USB, RS485
Protocol	>	MODBUS
Input power	>	24V DC
Dimension	>	4.45cm x 11cm x 2.5cm
Weight	>	190 g (HHL 120g and PCB 70g)
Operational temp.		-20°C to +30°C @ base plate. This working environmental temperature must in any case be above dew point to avoid water condensation

Software and communications

POWERMIR by mirSense

Each system can be controlled by MODBUS over RS485 and several systems can be controlled by one single supervisory computer. Furthermore, a user-friendly Windows software is supplied to allow customers to easily control one or several systems. See software user guide for more details.

Drawings (dimensions in mm)

One single PC can control several systems

You might want to read the following documents that were written to help our customers better control their OEM driver+laser modules, please ask your mirSense representative to send you the latest pdf versions.

HHL-packaged lasers

The High Heat Load (HHL) package includes the high power laser mounted on a thermoelectric cooler and suitable optics to collimate the beam of the laser.

Benefits:

- Built-in TEC and thermistor for temperature control of the chip
- Built-in collimated lens
- Robust packaging for harsh environments

Features

Packaging	Hermetically sealed with nitrogen gas fill inside a High-Heat Load (HHL) package
Wall-plug efficiency	5 to 10%
Built-in TEC included	Imax = 5.2A, Vmax = 17.5V
Built-in temperature sensor thermistor	Resistance @ 25°C: 10 k Ω 0/50 °C Beta value: ß =3892 K
Laser current (typ.)	2 A
Laser voltage	10 to 20 V
Operational temperature	-20°C to +30°C @ base plate. This working environmental temperature must in any case be above dew point to avoid water condensation
Weight	120 grams

The above HHL-package built-in diagram shows the thermistor indicates the that The laser chip temperature. diagram also shows the base plate that dissipates the heat (because typically the built-in TEC will cool down the laser chip).

In its shipping case

If you need, your mirSense representative can send you the 3D step file of the HHL-packaged laser. Do not solder the pins of the HHL; you may use crimp housing from the Molex brand (ref 22-01-3107) and crimp terminal (Molex ref 08-50-0032) to connect your laser. Do not use hands to touch the window surface, wear gloves as your digital fingerprints can stay on the window of the HHL-laser.

	HHL-packaged laser	OEM PCB driver +laser (POEM series)	Plug-and-play benchtop turnkey system
<100mW @ 4.6µm standard beam	PW4600090HSNA	PW4600090HSPCB	PW4600090HSTK1A

<100mW @ 4.6µm circular beam	PW4600090HCNA	PW4600090HCPCB	PW4600090HCTK1A
>450mW @ 4.6µm circular beam	PW4600450HCNA	PW4600450HCPCB	PW4600450HCTK1A
>1W @ 4.6μm circular beam	PW4601000HCNA	PW4601000HCPCB	PW4601000HCTK1A

Optical power level	Safety class of the laser system	
> 500mW	Class 4	
Between 50mW and 500mW	Class 3B	
Between 10mW and 50mW	Class 3R	
< 10mW	Class 1	

What is the safety class of my laser ?

Laser systems have safety classes to assess the risk for humans (like eye burning). The safety class is applicable for the global laser system, not to the individual diode because the safety class depends on how the laser diode is used. This is why mirSense doesn't give a laser safety class for its HHL-packaged lasers but only for its OEM and turnkey systems.

The laser safety class of a pulsed-laser system depends on the average optical output power.
